

Aras Innovator Signature Connector

The integration of qualified electronic signatures into the PLM system

aras
INNOVATOR[®]

With the interface Aras[®] Innovator[®]

Signature Connector developed by DataSquare, data in Aras Innovator can be provided with qualified electronic signatures for legally valid undersigning.

The electronic signature is the digital counterpart to handwritten signatures on paper documents: it identifies the signatory of an electronic document clearly and proves the integrity of signed electronic information.

For certain areas national legislators ask for special requirements concerning electronic signatures. In Germany, an electronic signature can only replace the statutory written form when complying to the § 2 No. 3 Signature Act, in order to secure the evidentiary value of the signature according to the code of civil procedure. The signatory confirms his electronic signature entering a PIN number using a connected signature card reading unit. Also, his signature card has to come from an authorized provider.

The embedding of a qualified electronic signature in Aras Innovator allows the user to abandon paper documents completely. The manual administration of signed papers, their filing in folders and costly exchange by mail are therefore a thing of the past. All documents can be digitally administered and archived in a legally secure manner.

For companies which depend on the ability to sign documents legally within their PLM processes, Aras Innovator Signature Connector now paves the way for completely IT supported procedures and a purely digital document management. Processes will become considerably simplified as well as accelerated and unrestrictedly automated.

The Signature Connector integrates the signature software and hardware into Aras Innovator. The signature process is controlled by Aras Innovator, with the signature software working in the background. The user only has to operate the Aras Innovator client, entering his PIN number at the terminal. While using the interface, the certification claimed by the legislator is certainly guaranteed.

Aras Innovator Signature Connector at a glance:

- Integration of qualified electronic signatures in data administration and process control
- Filing of documents in a legally secure manner
- Digital distribution of signed documents
- Complete elimination of paper documents
- Simplification, acceleration and automation of processes
- Comfortable to operate
