

## Enhancements in Version 10.0 SP3

- Microsoft SQL Server 2014**  
 The primary goal of the release was to introduce support for Microsoft SQL Server 2014
- Direct entry of Date Property values**  
 The client has been enhanced to allow users to key in date values without requiring the use of the date selector dialog.
- Support for Windows Store Applications**  
 A new IOM SDK is available that contains .NET, COM, and Windows RT compatible DLLs.

## Issues Fixed in Version 10.0 SP3

Table 1: Framework

Required	Issue #	Description
Yes	022059	Introduced the ability to directly type in date values in Form Fields and Relationship Grid cells.
Yes	025363	Introduced support for Microsoft SQL Server 2014
Yes	025689	A new IOM SDK has been created for use in developing external applications that connect to Aras Innovator. This SDK specifically contains .NET, COM, and Windows RT compatible DLLs, to support all 3 types of connections. A "readme" file has been included in the archive to identify each file.
Yes		Previously, application developers would copy the IOM file from the Aras Innovator code tree when developing applications. The new SDK DLLs eliminate the process of copying the IOM from the code tree so that Aras can undertake removing all external dependencies from the IOM DLLs.
Yes		An example for using the Windows RT compatible IOM has been included in the documentation folder of the CD image.
Yes	026007, 025530	Improvements to the Rich text Editor
Yes	025262	Improvements to the Just Ask Innovator on-line help content.
Yes	024966	Introduced option to not load the .NET controls in Internet Explorer. This option will allow the user to log in without elevating the site permissions for .NET, but the user will not be able to use the full functionality of the client. If a .NET control is required, the user will be presented with an error message and will need to enable .NET controls to use that feature in the user interface.
Yes	024573	Improved content in API reference for FireFox.
Yes	025246	Fixed error that could prevent the Method editor from loading in Internet Explorer 11
