Enhancements in Version 11.0 SP6

Chrome Browser Support

Introduced support for the Google Chrome browser on the client.

Support for Large Files

Files of any size can now be stored in Aras Innovator.

Improved File controls

The control which allows the user to select or drag-and-drop a file has been enhanced to indicate when the file is selected but not yet saved. The usability of the Manage File dialog has also been improved.

New Content Modeling Framework (CMF) administration

Editing of the CMF "Content Type" ItemType and related ItemTypes is improved by combining all editing within a single tree-based window.

Menus, Toolbars, and Shortcuts defined with Command Bar modeling

Menus, context menus, and toolbars for both the main window and tear-off windows, as well as all shortcut keys, are now defined using the Command Bar modeling capability. This means that all these user interface features are now configurable, including by Identity and Item Classification.

New toolbars and menu in Visual Collaboration viewers

When using any of the Visual Collaboration viewers, users now have the ability to switch between the basic "floating" toolbar and new standard toolbars. The basic toolbar now contains only basic functions for casual users, while the standard toolbars contain all functions. The standard toolbar is configurable based on Command Bar modeling, including by Identity. A new Viewer menu is now present when using any of the viewers, which includes specialized functions and a new Preferences dialog. Preferences allows setting a custom PDF viewer resolution, to match exact sizing to a printed PDF page.

Issues Fixed in Aras Innovator 11.0 SP6

Table 1:   Framework

Issue #	Description
030851	Fixed error that can cause the History Container window to fail to load correctly.
032874	Introduce support for the Google Chrome browser on Windows and Mac
032994	Fixed error that can cause labels on CAD documents to lose whitespace in Visual Collaboration view.
035005	Introduced administrative interface for the content modelling framework.
037107	Introduced new PDF viewer for use with Firefox and Chrome when viewing files in the Visual Collaboration feature.
028722, 032512, 033714	Fixed error that can cause the Where Used dialog to load behind the Item Window.
033444, 030724, 037661	Introduced new "Manage File" dialog in the client UI for accessing files in Aras Innovator.
037105, 037106, 037112	Enhanced toolbars and menus for Visual Collaboration to allow changes using a preference model.
034919, 034920, 036304, 036441	Extended capabilities of the configurable user interface to allow changes to toolbars and menu bars in the main and item wndows.
021137, 024707, 036679, 034316, 038261	Introduced the ability to upload files larger than 2GB to the vault using Internet Explorer or Firefox. Chrome is still limited to a maximum upload size of 2 GB.
