

Enhancements in Aras Innovator 12.0 SP17

Mandatory Access Control (MAC) updated for use with Enterprise Search platform component.

- Mandatory Access Control (MAC) can now be applied to search results in Enterprise Search. This functionality is automatically enabled for all active MAC policies. The MAC permissions will be updated in existing databases when the Enterprise Search permission crawler executes.

3D Visualization will now be managed as a separate platform component

- Starting in Version 12.0 SP17, 3D viewing (including Monolithic and Dynamic 3D Viewers) and CAD Conversion will be managed and released as a separate Platform Component called '3D Visualization'. The three components of 3D Visualization (3D Viewers, CAD Conversion, and Dynamic Visualization) will now be installed as a separate download. Existing subscribers should see the 3D Visualization platform component documentation for upgrade procedures.

1.1.1 Issues Fixed in Aras Innovator 12.0 SP17

Table 1: Framework

Issue #	Description
090342	Corrected an issue when looking at the Affected Item tab on an EC. Now the icon under the type column is displayed correctly instead of the tag code.
090655	Corrected an issue which could result in an empty Query Execution result if the Query Definition contained a Join Condition with xProperties.
F-003536, F-003549, F-003530	3D Visualization and CAD File Conversion will now be managed as an independent Platform Component making it easier for customers to incorporate 3D Visualization enhancements and supported CAD file formats.
F-004402	Created new and updated CUI commands for common actions like Delete and Unclaim
I-028689	Corrected an issue in which Save/Done buttons would not be disabled if the SaveCommand was not allowed.
I-029041	Addressed an issue in which Classification dialog was not shown and error message with text "Lookup for string is not available." would appear when a User clicked on the '...' button.

Issue #	Description
I-029644	Fixed an issue in which the Discard Changes dialog would not appear after unclaiming an item in the grid.
I-029799	Addressed an issue in which unsaved changes made to a Property selection of the root Query Item were lost after query execution.
I-031229	Conversion of the characters "\ " in search criteria (representing the actual " " character) behaves correctly between Simple search mode and AML search mode works correctly.
I-031257	Conversion of the characters "\\\" in search criteria (representing the actual "\" character) behaves correctly between Simple search mode and AML search mode works correctly.
I-031269	Fixed an issue in which "Done Editing" was missing from the menu in the relationship grid, when the same item had been previously edited in a form.
I-031457	Fixed an issue in which a warning would not be displayed, and the search would not actually be done in AML mode, if AML Search was selected from the Titlebar.

Table 2: Container Deployment

Issue #	Description
I-029363	The licensing issue when running the containerized Conversion Server was resolved. Watermarking using Conversion Server Images should now succeed.
