

# Aras Innovator PLM MS Office Connector

The **Aras Innovator MS Office Connector** is designed to save and find existing Office documents faster, to reduce file administration work and to avoid multiple data acquisition. The Innovator PLM menu is embedded in the MS Office application enabling easy get and save of existing documents, release and revisioning of Office documents as well as synchronizing MS Office properties with Innovator PLM.

## Main features of the connector user interface are:

- load and save of MS Office documents (doc, xls, ppt, etc) and other multimedia files
- the files are managed, checked in/out from the Innovator file vault
- documents can be related to parts or other document records
- existing files can be changed and saved as new objects or
- modified files can be saved as new revision
- updating properties and save with thumbnails before check-in/out
- where used informations are enabled by document relations
- PLM attributes and status information can transfered to the document file
- Updating of document properties
- creating viewable file formats,
- status change and automatical notification
