

Seminar Topic

Configuration & Change Management

Length

1 day session

Format

Interactive combination of overview discussions and exercises

Description

The workshop combines hands-on exercises, overview presentations, and discussions to provide an understanding of how the Aras Product Engineering solution supports configuration and change management for different business strategies and corporate environments. Participants learn how the solution applies industry best practices such as the CMII principles to address specific business requirements and will understand the possibilities and capabilities available for better configuration management, part & document management, and change control.

Objectives

At the end of the course, participants will understand:

- How configuration & change management practices can be applied in your business
- How documents, parts, and bills of material can be managed more effectively
- How to use secure, online workflows for change control
- How workflow & lifecycle templates standardize and streamline change processes
- How the Aras solution can complement existing systems

Agenda

Topics	
Configuration & Change Management	Change Management Workflows
